## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1, 2, and 8-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The newly amended claim language of claim 1 directed to "connected to the switching circuit to supply energy in a non-contact manner... regardless of whether the external circuit bridge is an open or closed circuit" has not been adequately disclosed in the specifications to enable one of ordinary skill in the art to clearly understand the invention, so as to make and/or use the device as intended. Specifically, the language of "to supply energy in a non-contact manner from outside the seal body" lacks enablement and is not fully understood to one skilled in the art.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1, 2, and 8-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, "connected to the switching circuit to supply energy in a non-contact manner... regardless of whether the external circuit bridge is an open or closed circuit" is not fully understood. Specifically, the language of "to supply energy in a non-contact manner from outside the seal body" lacks enablement and is not fully understood to one skilled in the art.

### ***Response to Arguments***

Applicant's arguments of 3/29/10 have been fully considered, but are not persuasive.

Applicant argues that the claims do not create issues of 112 first and second paragraphs, as outlined above. The examiner disagrees. In particular, there is no adequate disclosure of structure to the claim language of "to supply energy in a non-contact manner from outside the seal body". The examiner is of the position that this lacks enablement and would not be fully understood to one skilled in the art.

***Conclusion***

This action is non-final.
